

## THE USE OF IPSC MICRO TARGETS IN IPSC RIFLE, PCC AND ACTION AIR MATCHES

The IPSC Executive Council has decided that the use of IPSC Micro Targets be permitted for evaluation purposes in IPSC Rifle, PCC and Action Air matches up to, and including, Level III to allow distance simulation. The next IPSC Assembly will decide whether to adopt the target for these Disciplines.

Their use is subject to the conditions set out below.

### Rifle Only

In order to help develop IPSC Rifle in Regions that currently do not have long distance ranges and find it difficult to comply with the recommended distances set out in Rule 1.2.1.6, an interested Region may apply to the IPSC Executive Council for consent to run Level III matches using these targets in the Region. If granted, such consent will last for a period of one year from the date of the grant.

### Rifle and PCC

1. They are used to simulate IPSC Targets and IPSC Mini Targets placed at greater distances.
2. They may be included together in the same target array with IPSC Poppers or IPSC Mini Poppers.
3. They must not be included together in the same target array with IPSC Targets or IPSC Mini Targets.
4. The target scoring zones are to be scored the same as for IPSC Targets and IPSC Mini Targets.

### Action Air

1. They are used to simulate IPSC Action Air Targets placed at greater distances.
2. They may be included together in the same target array with IPSC Action Air Poppers or IPSC Action Air Mini Poppers.
3. They must not be included together in the same target array with IPSC Action Air Targets.
4. The target scoring zones are to be scored the same as for IPSC Action Air Targets.
